

Small position corrugations, order-one tangent changes

(a) Planar seed, $N = 16$

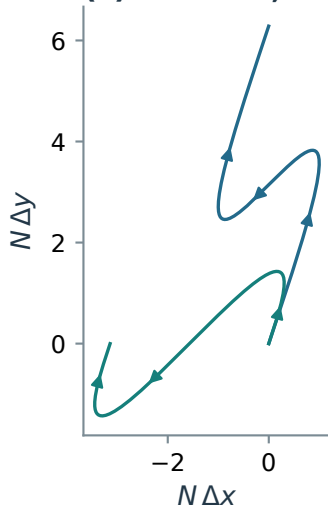

(b) Spherical lift

$$\zeta_N = (\beta_N, 1) / \sqrt{1 + |\beta_N|^2}$$

(c) One cell, $N = 10^4$

$\delta_{N'} = m_N \beta_{N'}$, $m_N > 0$; the two cell traces are translated separately.
